

QLIKVIEW DOCUMENT ANALYZER GETTING STARTED

Unzip the archive. This bundle contains three utilities.

Document Analyzer_Vn.qvw

This tool is used to analyze the structure of a qvw. The analysis focuses on what fields are used and where. This information may be used to tune the performance of a Document or investigate the impact of data changes.

Open the QVW and follow the instructions on the “Main” sheet to get started. Note that a class in using Document Analyzer is offered at the [Q-On Training Center](#).

DACompareTool_Vn.qvw

This application is used to analyze and report on results from the Document Analyzer tool. Input to this tool is the DocumentAnalyzerResults*.qvd files produced by Document Analyzer.

For more information on the DaCompare tool see here: <http://qlikviewcookbook.com/2017/01/the-document-analyzer-compare-tool/>

DaBatch.txt

This script is used to execute the Document Analyzer tool over all the QVWs in a specific directory.

The file should be renamed from DaBatch.txt to DaBatch.cmd before using.

Usage: DaBatch.cmd somedir

where “somedir” is a directory of QVWs to analyze. QVW and QVD result files will be saved in the “DaResultsDir” directory specified in the script. See the script comments for configuration instructions.

For more information on DaBatch see here: <http://qlikviewcookbook.com/2017/07/document-analyzer-batch-analysis/>
